

SAFETY POLICY STATEMENT

Health, Safety, Environmental & Quality Policy
ABN 41 163 122 156 | Version 1.0 — May 2026

"We don't cut corners. We Build them."

CONTENTS

1. Directors' Commitment
2. Our Safety Philosophy
3. Scope of This Policy
4. Legislative Compliance & Approvals
5. Risk Management & Hierarchy of Controls
6. Working at Heights
7. Respirable Crystalline Silica & Dust Management
8. Heritage, Renovation & Hazardous Materials Protocol
9. Psychosocial Hazards & Mental Health
10. Physical Wellness & Active Recovery Program
11. Noise & Acoustic Management
12. Community & Neighbour Protection
13. Adaptive Safety Planning & Dynamic Site Reviews
14. Training, Induction & Competency
15. Incident Reporting & Emergency Response
16. Industry Leadership & Community Support
17. Mental Health Crisis Resources
18. Policy Authorisation

1. DIRECTORS' COMMITMENT

The Directors of Logix Build Pty Ltd — Gabriel Muj and D'Artanien Muj — are personally and unreservedly committed to the health, safety, and wellbeing of every person who enters a Logix Build worksite, and every person in the surrounding community who may be affected by our operations.

This commitment extends equally to our employees, subcontractors, suppliers, visitors, neighbouring residents, pedestrians, and the broader public. We accept full accountability for the safety performance of every project we undertake, without exception.

Since founding Logix Build in 2013, we have delivered over \$50 million in completed project value across Sydney — residential and commercial — with zero recorded safety incidents. This is not a statistic we take for granted. It is the direct result of a culture of accountability, daily vigilance, and a genuine refusal to accept shortcuts of any kind.

We believe that safety is not a compliance exercise. It is a moral obligation. Every worker on our sites has a family to return to, and every decision we make is guided by that understanding. This Policy formalises the standards, systems, and principles that govern safety at Logix Build — but the real foundation is the culture we have built over more than a decade of hands-on construction leadership.

2. OUR SAFETY PHILOSOPHY

Logix Build was forged in the residential sector — building large-scale, one-of-a-kind custom and designer homes featured on Grand Designs Australia, Australia's Best House, Open Homes Australia, and Australia's Amazing Houses. These are not standard builds. They involve complex structural engineering, cutting-edge materials, and unconventional construction methods that demand a safety culture far more rigorous than what is typically found in residential construction.

In the commercial construction sector, robust safety management is widely understood and mandated. In residential construction, however, it is often treated as secondary. Logix Build has operated differently from the beginning. We have spent years enforcing strict safety measures on every residential site, holding every trade to the same standards that a Tier 1 commercial builder would expect. We believe we operate at the leading edge of residential site safety in Sydney.

As we expand into the commercial sector, we bring this culture with us — along with the deep understanding of unique materials, unconventional hazards, community sensitivity, and adaptive site management that comes from delivering the most complex residential projects in the country. Our competitive advantage is that we do not merely comply with safety regulations — we treat them as a minimum baseline and build significantly above them.

3. SCOPE OF THIS POLICY

This Policy applies to all Logix Build operations including residential construction, commercial construction, heritage restoration, strata maintenance, and development projects. It covers all employees, directors, subcontractors, suppliers, consultants, and visitors across every worksite managed by Logix Build Pty Ltd. This Policy operates in conjunction with relevant Safe Work Method Statements (SWMS), site-specific safety plans, environmental management plans, and project-specific risk assessments.

4. LEGISLATIVE COMPLIANCE & APPROVALS

Logix Build maintains full compliance with all applicable health, safety, and environmental legislation in New South Wales. Our operations are governed by:

- Work Health and Safety Act 2011 (NSW)
- Work Health and Safety Regulation 2025 (NSW)
- Environmental Planning and Assessment Act 1979 (NSW)
- Protection of the Environment Operations Act 1997 (NSW)
- Home Building Act 1989 (NSW)
- AS/NZS ISO 45001:2018 — Occupational Health and Safety Management
- AS/NZS ISO 14001:2015 — Environmental Management Systems
- National Construction Code (NCC) / Building Code of Australia (BCA)
- SafeWork NSW Codes of Practice (all applicable)
- Safe Work Australia — Workplace Exposure Standards for Airborne Contaminants

Logix Build holds all licences, insurances, and registrations required to operate as a building contractor in NSW, including appropriate classes of builder's licence issued by NSW Fair Trading, comprehensive public liability and workers' compensation insurance, and registration with the NSW Silica Worker Register where applicable. All employees and subcontractors hold current General Construction Induction Cards (White Cards) and any additional high-risk work licences relevant to their scope.

5. RISK MANAGEMENT & HIERARCHY OF CONTROLS

Logix Build applies the Hierarchy of Controls mandated by SafeWork NSW across every project. Risks are managed in strict priority order: elimination, substitution, isolation, engineering controls, administrative controls, and personal protective equipment (PPE). We never rely solely on PPE as a primary control where higher-order measures are reasonably practicable.

Every project begins with a comprehensive risk assessment conducted prior to commencement. Site-specific Safe Work Method Statements (SWMS) are prepared for all high-risk construction work as defined under the WHS Regulation 2025. These documents are living instruments — reviewed and updated whenever site conditions change, new trades are introduced, or new hazards are identified.

Logix Build takes full responsibility for every subcontractor and trade on every project. Where most builders defer to subcontractors when issues arise, we treat every problem as our own to resolve. This extends equally to safety: every trade on a Logix Build site operates under our safety framework, our supervision, and our standards — without exception.

6. WORKING AT HEIGHTS

Falls from heights remain the primary cause of traumatic injuries and fatalities on NSW construction sites. Logix Build enforces a strict, zero-tolerance approach to unprotected work at heights on every project, whether residential or commercial. Our approach includes:

- Eliminating the need to work at heights wherever possible through design-stage consultation and ground-level prefabrication.
- Prioritising fall-prevention devices such as scaffolding with fully compliant guardrails, elevating work platforms (EWPs), and perimeter edge protection.
- Using work-positioning systems (harness-based restraint) only where fall-prevention devices are not reasonably practicable.
- Deploying fall-arrest systems (safety nets, catch platforms, harness-based arrest) as a last resort, always with tested emergency rescue procedures.
- All scaffolding erected, inspected, and maintained by licensed scaffolders with handover certificates documented before access.
- Scaffold inspections at least every 30 days by a competent person, and daily visual checks before each shift.
- Site-specific SWMS for all work where a person could fall more than two metres.
- All ladders industrial-rated, inspected before use, secured at top and bottom, three points of contact maintained, and never working from the top two steps of an A-frame.
- Temporary roof edge protection, skylight covers, and crawl boards installed prior to any roof access.

7. RESPIRABLE CRYSTALLINE SILICA & DUST MANAGEMENT

7.1 How We Identified This Risk

Logix Build specialises in large-scale designer homes that incorporate a wide range of natural and manufactured elements. Over our projects, we have installed in excess of 5,000 square metres of natural and engineered stone — including granite, marble, bluestone, sandstone, travertine, and formerly engineered stone benchtops. These materials contain varying concentrations of crystalline silica that when cut, ground, drilled, or polished produces respirable dust particles invisible to the naked eye.

Silicosis — an incurable, progressive scarring of the lungs caused by inhaling respirable crystalline silica (RCS) — is now recognised as one of the most significant occupational health threats in Australian construction. Since 2017, over 500 cases of silicosis and 36 deaths have been recorded in NSW alone.

We recognised early that stone fabrication and installation was an understated risk on residential sites. Rather than accept the status quo, we sought out leading specialists in occupational dust diseases and silicosis prevention, including guidance aligned with the work of the Asbestos and Dust Diseases Research Institute (ADDRI) and SafeWork NSW's dedicated Silica Compliance Team. We approached these experts not as a response to regulation, but out of a genuine duty of care for our workers, our neighbours, and the environment.

7.2 How Cutting Stone Affects the Lungs

When stone or concrete products are cut, ground, or drilled without adequate controls, microscopic silica dust particles — smaller than 10 microns — become airborne. These particles penetrate deep into lung tissue, causing irreversible fibrosis (scarring) that progressively reduces lung capacity. Silicosis can manifest as chronic (10+ years), accelerated (1–10 years), or acute (within months). Advanced cases lead to severe shortness of breath, heart failure, and death. Long-term RCS exposure is also associated with lung cancer and kidney disease. The current workplace exposure standard in Australia for RCS is 0.05 mg/m³ for an 8-hour time-weighted average.

7.3 Our Silica Control Measures

- Water suppression systems on all cutting, grinding, and drilling of silica-containing materials — dry cutting is eliminated entirely from our sites.
- On-tool dust extraction and local exhaust ventilation (LEV) systems to capture dust at the source.
- Isolation of dust-generating activities through physical barriers, designated cutting zones, and exclusion perimeters.
- Mandatory respiratory protective equipment (RPE) fit-tested to Australian Standards with documented fit-check procedures before every use. Surgical masks are never accepted.
- Housekeeping using water or H/M-class vacuum systems. Dry sweeping is strictly prohibited.
- Health monitoring for all workers with significant RCS exposure, conducted by registered medical practitioners per Schedule 14 of the WHS Regulation.
- Registration of high-risk workers with the NSW Silica Worker Register (operational since October 2025).
- Continuous air monitoring with any WES exceedance notified to SafeWork NSW within 14 days.
- Regular toolbox talks on silica risks, translated into multiple languages where required.

7.4 Environmental Protection

Silica dust affects communities and ecosystems beyond the worksite. Logix Build prevents silica-laden dust and contaminated water from leaving our sites. Stormwater runoff from cutting areas is captured and filtered. Dust barriers and extraction systems prevent contaminated particles from reaching neighbouring properties, waterways, or public areas.

8. HERITAGE, RENOVATION & HAZARDOUS MATERIALS PROTOCOL

Logix Build has extensive experience in heritage restoration across Sydney. Older buildings — particularly those constructed before the mid-1980s — present serious hazardous material risks requiring specialist knowledge and rigorous protocols.

8.1 Hazardous Materials in Heritage & Older Buildings

- **Asbestos:** Used extensively from the 1930s to mid-1980s in fibro sheeting, roofing, insulation, pipes, and floor tiles. Banned in Australia in 2003. When disturbed, fibres cause mesothelioma, asbestosis, and lung cancer. Only Class A or Class B licensed removalists handle asbestos on our sites. All suspected ACMs are NATA-laboratory tested before work begins.
- **Lead-Based Paint:** Used until 1970, with formulations up to 50% lead. Becomes hazardous when sanded, scraped, or heated. Causes neurological damage, kidney disease. Licensed assessors engaged for all pre-1970s painted surfaces.
- **Polychlorinated Biphenyls (PCBs):** Used in electrical transformers/capacitors from the 1930s–1970s. Linked to thyroid disorders. All older electrical systems assessed before work begins.
- **Volatile Organic Compounds (VOCs):** Found in older paints, varnishes, adhesives. Cause respiratory irritation and organ damage. Ventilation and air monitoring implemented during any disturbance of legacy materials.

- **Contaminated Dust:** Ceiling cavities and subfloor areas harbour dust contaminated with lead, arsenic, and heavy metals. Containment and controlled extraction required before interior demolition.
- **Synthetic Mineral Fibres (SMFs):** Used in older insulation, causing skin and respiratory irritation. Appropriate PPE and decontamination procedures provided.

8.2 The Logix Build Heritage Protocol

- Pre-commencement hazardous materials survey by a licensed assessor for every project involving pre-1990 buildings.
- NATA-accredited laboratory testing of all suspected asbestos, lead, and PCB-containing materials before disturbance.
- Licensed Class A/B asbestos removalists for all asbestos work, with clearance certificates.
- Containment and negative air pressure systems in zones where friable asbestos or lead paint is removed.
- Air monitoring during and after hazardous material removal to confirm safe particle levels.
- Controlled disposal at EPA-approved facilities with waste tracking documentation.
- Site decontamination verified by independent assessment before general trades re-enter.
- Worker health monitoring for all personnel involved in hazardous material work.

9. PSYCHOSOCIAL HAZARDS & MENTAL HEALTH

Logix Build believes unequivocally that you cannot have a healthy body without a healthy mind. Construction is one of the most psychologically demanding industries in Australia. Approximately 190 Australian construction workers die by suicide every year — one every second day. Male construction workers are nearly twice as likely to take their own lives as men in other occupations, with a suicide rate of approximately 26.6 per 100,000 compared to 13.2 per 100,000 for other employed males. The industry is six to eight times more likely to lose a worker to suicide than to a workplace accident.

We take psychosocial hazards as seriously as physical hazards. Under the WHS Regulation 2025, PCBUs have a legal obligation to identify, assess, and control psychosocial risks — and Logix Build fully embraces this obligation.

9.1 Our Approach to Mental Health

- **Genuine check-ins:** Directors and site managers regularly check in with every worker — not as compliance, but as genuine human conversation.
- **Culture of community:** We teach workers that looking after each other is part of being on a Logix Build site. Notice changes in your mates, ask questions, offer support.
- **Open dialogue:** Mental health is discussed openly and without stigma. We are committed to changing the culture of silence that has historically pervaded construction.
- **Accessible support:** All workers have access to mental health helplines, EAPs, and direct referrals to professional counselling. Crisis numbers are displayed on every site.
- **Psychosocial hazard management:** We identify and manage hazards including role overload, conflict, poor relationships, violence, bullying, harassment, inadequate recognition, hazardous environments, and isolated work.

10. PHYSICAL WELLNESS & ACTIVE RECOVERY PROGRAM

Logix Build actively promotes physical wellness among our workforce. Research consistently demonstrates that regular physical exercise releases serotonin and endorphins — neurochemicals that improve mood, reduce anxiety and depression, and promote better sleep. For construction workers facing physically demanding work, long hours, and environmental stressors, structured physical activity is a powerful protective factor for both mental and physical health.

Through our deep understanding of the construction industry and the temperament of tradespeople, we have identified that combat sports — particularly Mixed Martial Arts (MMA) and Brazilian Jiu-Jitsu (BJJ) — resonate strongly with our workers. These disciplines build physical resilience, teach controlled stress management, improve cardiovascular fitness, and provide a structured social community outside work where workers build genuine friendships and support networks.

Logix Build has established partnerships with several MMA and BJJ gyms across Sydney. We actively encourage workers to engage in regular training. The benefits are multifaceted: improved mood and energy, reduced musculoskeletal injury risk through better conditioning, stronger social connections, improved sleep, and a meaningful outlet for stress. Workers who engage in regular physical activity return to site in better spirits, with greater focus and reduced risk of both injury and psychological distress.

This reflects our broader philosophy: safety is not just about preventing harm on site — it is about building people up so they are physically capable, mentally resilient, and socially connected. A worker who feels strong, supported, and valued is a safer worker.

11. NOISE & ACOUSTIC MANAGEMENT

Noise pollution is one of the most common complaints from communities surrounding construction sites, and prolonged occupational noise exposure causes irreversible hearing loss among construction workers.

Our Operations Director, D'Artanien Muj, completed specialised study in acoustics and engineering noise control at Curtin University, one of Australia's leading institutions for acoustic engineering research. Curtin's program addresses the increasing need for engineers to manage noise impact in our environment — directly applicable to construction site operations, equipment selection, scheduling, and community impact mitigation. This academic foundation informs Logix Build's approach to noise management across all projects.

Our noise and acoustic management measures include:

- Pre-project acoustic impact assessment for sensitive sites adjacent to residential properties, schools, hospitals, and aged care facilities.
- Scheduling high-noise activities within approved hours and during periods of lowest community impact.
- Selection of lower-noise equipment where feasible, including electric-powered alternatives.
- Temporary acoustic barriers and hoarding on site perimeters to attenuate noise transmission.
- Mandatory hearing protection (AS/NZS 1270-compliant) for all workers in zones exceeding 85 dB(A), with audiometric testing for ongoing noise exposure.
- Continuous noise monitoring at site boundaries on sensitive projects with real-time exceedance alerts.
- Community notification protocols including letter-drops and direct engagement with adjoining residents.

12. COMMUNITY & NEIGHBOUR PROTECTION

Years of residential construction have given Logix Build a profound understanding of building next to people's homes. Our residential projects are frequently surrounded by occupied dwellings. This has shaped our approach: we treat every site as if families are living next door, because they usually are.

- Environmental containment systems to prevent dust, debris, and contaminated water from leaving site boundaries.
- Sediment and erosion controls to protect stormwater systems, waterways, and adjacent properties.
- Strict adherence to council-approved construction hours, with pre-notification of any out-of-hours work.
- Acoustic hoarding and vibration management to minimise disturbance.
- Pedestrian and vehicle management plans ensuring safe public passage around worksites.
- Regular community engagement including introductory letters and direct site manager contact details.
- Clean site presentation reflecting respect for the surrounding community.

13. ADAPTIVE SAFETY PLANNING & DYNAMIC SITE REVIEWS

Construction sites are inherently dynamic. Conditions change daily — new trades arrive, structures evolve, materials are delivered, excavations deepen, scaffolding is modified, weather shifts. A safety plan adequate on Monday may be dangerously inadequate by Friday if not updated to reflect the current state of the site.

Logix Build operates on the principle that safety plans must be as dynamic as the sites they govern:

- Daily pre-start safety briefings addressing specific hazards and activities planned for that day.
- Weekly formal safety inspections with documented findings, corrective actions, and assigned responsibilities.
- Mandatory SWMS reviews whenever site conditions change — new phases, new trades, hazardous material deliveries, scaffolding changes, adverse weather.
- Immediate stop-work authority held by every worker on site.
- Hazard observation reporting actively encouraged before issues become incidents.
- Post-incident and near-miss reviews analysed for systemic improvement, not blame.

Across more than a decade of operations and over \$50 million in delivered project value, Logix Build has maintained zero on-site safety incidents. We attribute this directly to our adaptive, proactive approach — and we will never become complacent about it.

14. TRAINING, INDUCTION & COMPETENCY

Every person who enters a Logix Build worksite — employee, subcontractor, supplier, or visitor — receives a site-specific safety induction covering site hazards, emergency procedures, PPE requirements, exclusion zones, communication protocols, and behavioural standards.

Ongoing training includes regular toolbox talks, skills workshops, and external accredited programs. Workers in high-risk activities receive specialised training: working at heights certification, confined space entry, hazardous chemicals handling, asbestos awareness, silica safety, and first aid. All training records are maintained and reviewed.

15. INCIDENT REPORTING & EMERGENCY RESPONSE

Logix Build maintains emergency response procedures for every site — fire, medical emergency, structural collapse, chemical spill, and severe weather. Emergency contacts, muster points, and evacuation routes are communicated during induction and displayed on site.

All incidents, near-misses, and hazard observations are reported, documented, and investigated. Notifiable incidents are reported to SafeWork NSW per the WHS Act 2011. Our reporting culture is built on learning, not blame.

16. INDUSTRY LEADERSHIP & COMMUNITY SUPPORT

Logix Build believes safety should not be a competitive advantage — it should be a universal standard. The most important thing is that every worker, on every site, gets to come home to their family.

- Open invitation to other builders and companies to attend our safety meetings, seminars, and training.
- Sharing safety systems, templates, and protocols with smaller builders who lack resources to develop their own.
- Active participation in industry forums, SafeWork NSW initiatives, and construction safety advocacy.
- Mentoring emerging builders and trades on safety culture and compliance.
- Supporting programs like MATES in Construction for on-site suicide prevention and peer support.

A rising tide lifts all boats. When the industry is safer, everyone benefits — workers, families, clients, and communities.

17. MENTAL HEALTH CRISIS RESOURCES

If you or someone you know is in immediate danger, call **000**. The following support services are available 24/7 or during extended hours:

Service	Contact	Description
Lifeline	13 11 14	24/7 crisis support and suicide prevention
Beyond Blue	1300 224 636	24/7 anxiety, depression, suicide support
Suicide Call Back Service	1300 659 467	24/7 professional counselling
MATES in Construction	1300 642 111	Construction industry crisis support
MensLine Australia	1300 789 978	24/7 support for men
1800RESPECT	1800 737 732	24/7 domestic/family violence support
Kids Helpline	1800 551 800	24/7 support for ages 5–25
headspace	1800 650 890	Mental health support for 12–25 year olds
QLife	1800 184 527	LGBTQI+ peer support and referral
Open Arms (Veterans)	1800 011 046	24/7 veteran and family support
SANE Australia	1800 187 263	Complex mental health support
Brother to Brother	1800 435 799	24/7 crisis line for Aboriginal men
Blue Knot Foundation	1300 657 380	Complex trauma support
PANDA	1300 726 306	Perinatal anxiety/depression support
National Indigenous Postvention	1800 805 801	24/7 after-suicide support for Aboriginal and Torres Strait Islander communities

18. POLICY AUTHORISATION

This Safety Policy Statement has been authorised by the Directors of Logix Build Pty Ltd and applies to all operations, projects, and personnel effective from the date below. This Policy will be reviewed annually, or sooner if required by changes in legislation, project scope, or operational conditions.
